

MAX. Power 60W Isolated On-Board Type AC-DC Converter

## HS60 Series Isolated On-Board Type AC-DC Converter

### Features

- Power Saving Mode Operation
- Small, High Efficiency
- Isolated Input - Output
- Quasi-resonant operation and Current mode Control
- Low output Ripple & Noise
- Built-in over current protection circuit
- Built-in over Voltage protection circuit
- Short Circuit Protection
- Universal Input Voltage(Free Voltage)
- Built in EMI Filter
- Safety standard : CB,CE (approvals pending)
- RoHS compatible design

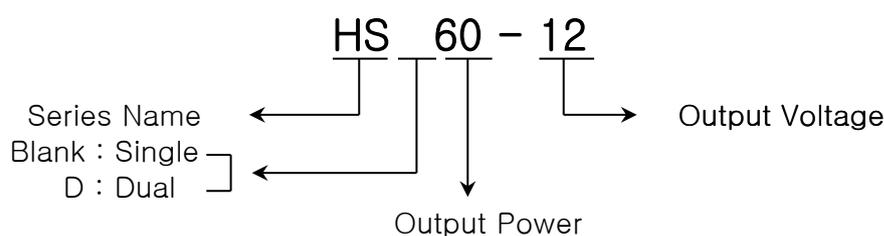

### Applications

- Data and telecommunication
- FA control
- Datacommunication electronic equipments

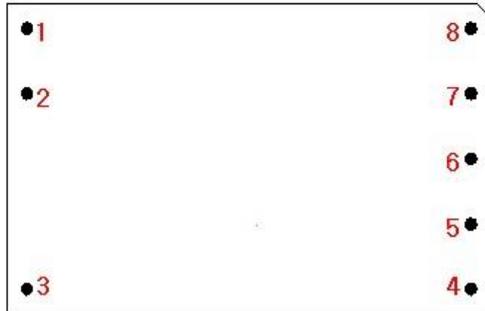

### Environment

- Operating Temperature : -10℃ ~ 70℃
- Operating Humidity : 20% ~ 90% RH (Non condensing)
- Storage Temperature : -20℃ ~ 75℃
- Cooling : Free-Air Convection
- MTBF : 3.0 x 10<sup>5</sup> hrs

### - Single Output Name & Function

PIN No.	NAME	FUNCTION
1	AC input L	AC input N
2	AC input N	AC input L
3	FRG	Frame Ground
4	FRG	Frame Ground
5	+Vout	Positive terminal for Vout
6	+Vout	Positive terminal for Vout
7	-Vout	Negative terminal for Vout
8	-Vout	Negative terminal for Vout

### - Dual Output Name & Function

PIN No.	NAME	FUNCTION
1	AC input L	AC input N
2	AC input N	AC input L
3	FRG	Frame Ground
4	FRG	Frame Ground
5	+Vout	Positive terminal for Vout
6	COM	The common ground of Vout
7	COM	The common ground of Vout
8	-Vout	Negative terminal for Vout

# Application Sheet

## Basic Connection

AC INPUT : 90Vac ~ 264Vac (Free Voltage)

- ※ For safety and improved noise, ensure secure connection of the FRG Pin to the ground terminal of the equipment.
- ※ To avoid excessive voltage drop and improved noise, short and thick wire should be used to connect the load.

## Input Section

### Input Fuse

Generally, ac-dc converter(HS Series) has internal fuse. Refer to Fuse Rating table. Avoid using fast-blow fuse.

< Fuse Rating table > Type : SS5, Time-Lag

	HS30	HS60
Fuse	2.0A	2.5A

UL/CSA or IEC approved type should be used to meet safety requirements.

## Output Section

### Output Ripple and Noise Measurement Method

The measurement for output ripple and noise are based on normal probe with 20MHz bandwidth scope. Upon measurement of the ripple voltage, make sure that the scope probe leads are not too long. If a precise measurement can be made, the noise occurs from circumference must be reduced.

### Regulation

#### Line Regulation

The line regulation means to the change in output voltage when the input voltage is varied within the input voltage range, at constant load and constant ambient temperature. The measurement point for the output voltage are  $\pm V_{out}$  pins respectively.

#### Load Regulation

The load regulation means to the change in output voltage when the load is changed from minimum load to maximum load, at constant input voltage and constant ambient temperature. The measurement point for the output voltage are  $\pm V_{out}$  pins respectively.

## Protection

### Over Current Protection

The HS60 series is built into an OCP(Over Current Protection) circuit. When the OCP triggers, the output voltage will fall. If overload condition is removed, the output will automatically recover.

### Short Circuit Protection

The HS60 series is built into an short circuit protection circuit. It is similar to OCP circuit. When output is short condition, the output voltage will fall. If short condition is removed, the output will automatically recover. However, if the short condition continues damage to the module could occur.

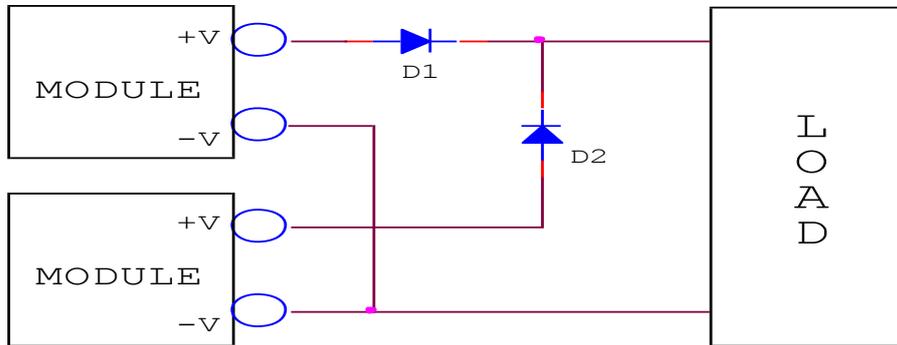

### Over Voltage Protection

The HS60 series is built into an OVP(Over Voltage Protection) circuit. When the OVP triggers, the output voltage is clamped 60%~80% of output voltage. The input must be taken out (for at least five seconds), and than reinputted manually. Otherwise, the module will maintain the clamped voltage.

## Operation Method

### Parallel Operation

The module can be operated parallel connection. Refer to diagram as shown below.

Please, you must consider both reverse voltage and forward current of diode, when you choose a diode.

Maximum reverse voltage( $V_{rm}$ ) :  $V_{rm} > 1.5 \times V_o$

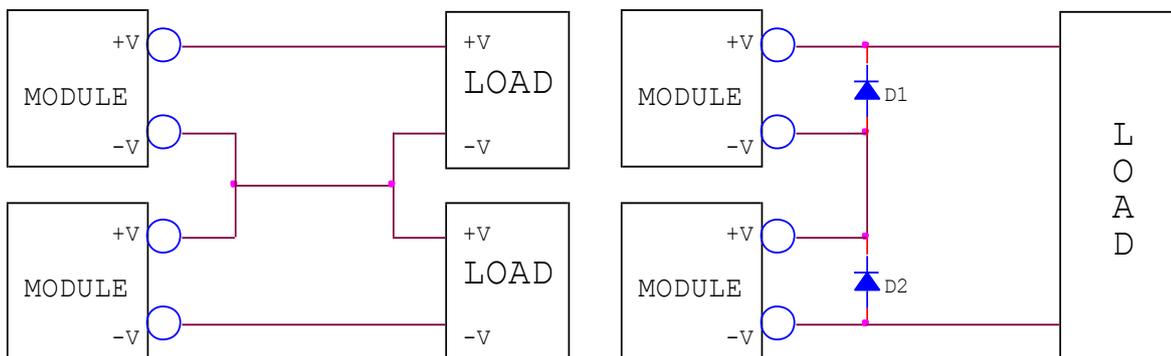

Forward current( $I_f$ ) :  $I_f > 3 \times I_o$

Also, design a heatsink according to power loss at diode. If you want to reduce power loss, use a schottky barrier diode.

Power loss =  $V_f(\text{forward voltage}) \times I_o(\text{output current})$

### Series Operation

Series operation is available by connecting the outputs of two or more module as shown below.

< A. General Series Operation >

< B. Complemental Series Operation >

Please, you must consider both reverse voltage and forward current of diode, when you choose a diode.

Maximum reverse voltage( $V_{rm}$ ) :  $V_{rm} > 1.5 \times V_o$

Forward current( $I_f$ ) :  $I_f > 3 \times I_o$

Also, design a heatsink according to power loss at diode. If you want to reduce power loss, use a schottky barrier diode.

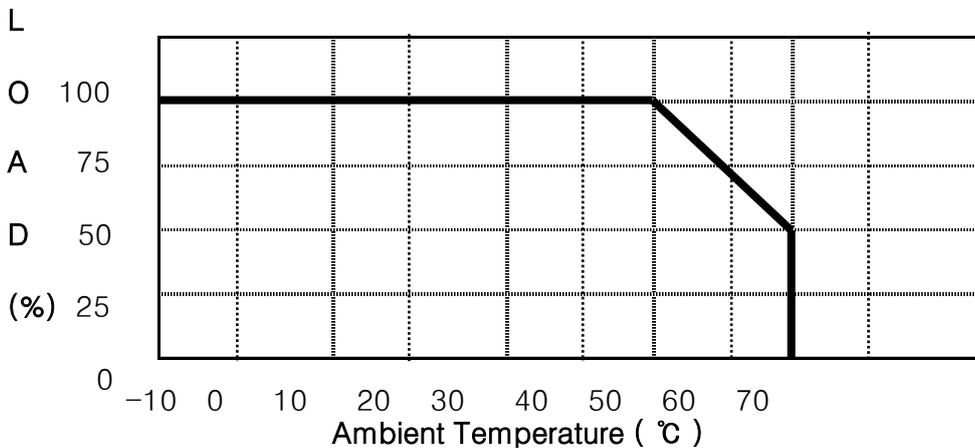

Power loss =  $V_f(\text{forward voltage}) \times I_o(\text{output current})$

## Environment

### Temperature

#### Operation Temperature

The range of ambient temperature in °C over which a module can be operated safely at either rated or derated output power. Refer to derating curve as shown below.

※ Operating Temperature Range : From -10°C to 70°C

### < Derating Curve >

#### Storage Temperature

The range of ambient temperature in °C over which a module may be stored long term without damage. The storage temperature range is from -20°C to 75°C.

### Humidity

#### Operation Humidity

The range of ambient humidity in % over which a module can be operated safely at either rated or derated output power. Refer to derating curve as shown below. The operating humidity range is from 20% to 90%RH.

#### Storage Humidity

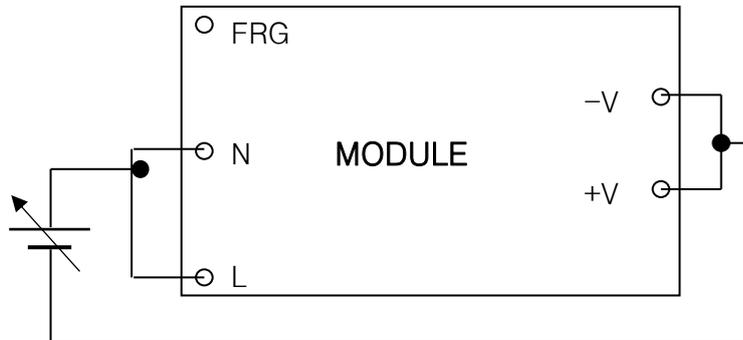

The range of ambient humidity in % over which a module may be stored long term without damage. The storage humidity range is from 20% to 90%RH.

## Isolation

### Isolation Resistance

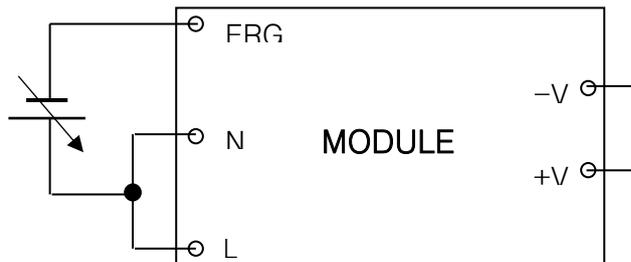

The electrical separation between input and output of a module by means of the power transformer. The isolation resistance is a function of materials and spacings employed throughout the module. Please don't test with a voltage above standard voltage for the Isolation Resistance Test.

#### < INPUT - OUTPUT >

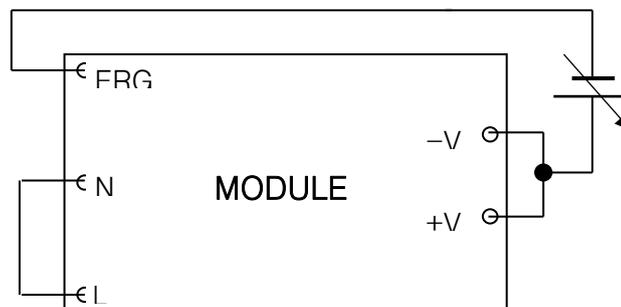

500VDC, 100MΩ

#### < INPUT - FRG >

500VDC, 100MΩ

#### < OUTPUT - FRG >

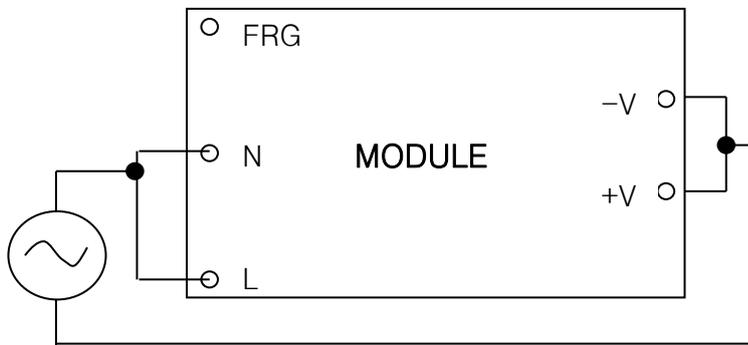

500VDC, 70MΩ

**Withstand Voltage**

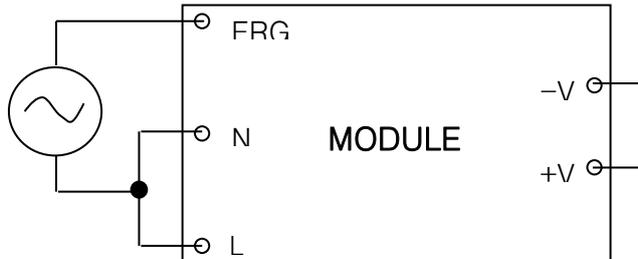

For the withstand voltage test, the applied voltage must be increased gradually from zero to the testing value, and then decreased gradually at shut down. Especially stay away from use of a timer. Where a pulse of several times the applied voltage can be generated.

**< INPUT - OUTPUT >**

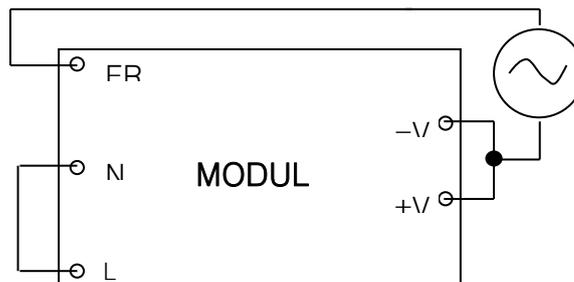

3kVAC (10mA) 1minute

**< INPUT - FRG >**

2kVAC (10mA) 1minute

**< OUTPUT - FRG >**

0.5kVAC (10mA) 1minute
